pwahub.io experienced more threats than average last month

Last month Cloudflare detected 117 security threats for ████████.io

Why it matters

- Your site saw more threats last month than the average site on Cloudflare. Here's what that means:
- The good news is that these threats were mitigated by Cloudflare with the basic web application firewall (WAF) and bot protection you have on the Free plan.
- The bad news is that more complex and sophisticated cyber attacks may not be stopped by your current [web application security](#) posture.
